

PERIPHERAL ARTERIAL DISEASE

**Interventional Radiologists
are helping patients with
peripheral arterial disease
get back in circulation.**

Do your legs hurt when walking – then feel better when you stop? Do you have leg numbness or sores that don't heal? Peripheral arterial disease (PAD) can have many symptoms, all caused by arterial clogging. An increasing number of PAD patients are walking pain free due to Interventional Radiologists – specialists who pioneered and perform minimally invasive treatments that restore circulation.

Know your options. Today you have nonsurgical choices and direct access to these specialists. Visit www.SIRweb.org for more information or a directory of Interventional Radiologists in your area.
