

OSTEOPOROSIS

Interventional Radiologists put lives and vertebrae back together.

There is new hope for osteoporosis patients who live with the pain and lifestyle restrictions caused by spinal fractures. Since 1994, a nonsurgical, outpatient procedure called vertebroplasty has brought relief – often within hours of treatment. This minimally invasive, image-guided treatment, performed by an Interventional Radiologist, significantly reduces pain and improves range of motion in more than 90% of patients treated.

Know your options. Today you have nonsurgical choices and direct access to these specialists. Visit www.SIRweb.org for more information or a directory of Interventional Radiologists in your area.
