UTERINE FIBROID EMBOLIZATION
A NONSURGICAL FIBROID FIX

WHAT ARE UTERINE FIBROIDS?

Uterine fibroids are noncancerous tumors that grow in the uterus. They are not usually dangerous, but their symptoms can be painful and disruptive.

Unpredictable cycles
Heavy menstrual bleeding
Frequent urge to use bathroom
Extreme pain
Impact on sex life

HOW ARE FIBROIDS TREATED?

WHAT IS UFE?

There are many options to treat uterine fibroids, but only interventional radiologists (IRs) perform UFE. Through a tiny incision in the wrist or groin, an interventional radiologist inserts a catheter that delivers particles to block the small blood vessels feeding each uterine fibroid, causing them to shrink and disappear.

HOW IS UFE DIFFERENT?

- Same-day procedure
- Shorter recovery time
- Quick symptom relief
- Unlikely to cause menopause
- Preserves the uterus
- Nonsurgical

IS UFE RIGHT FOR YOU? Figure out your fibroid fix.

- Am I looking for fast symptom relief?
- Would a shorter recovery time be better for my lifestyle?
- Am I considering having children in the future?
- Do I want to try to avoid going through early menopause?
- Do I want to preserve my uterus?

If you answered "yes" to any of these questions, UFE might be right for you.

For more information on uterine fibroids and to find out if UFE is right for you, download our patient checklist at sirweb.org/fibroidfix.

The Society of Interventional Radiology is a nonprofit, professional medical society representing more than 7,000 practicing interventional radiology physicians, trainees, students, scientists and clinical associates, dedicated to improving patient care through the limitless potential of image-guided therapies.
