Kimberly Kirchmeyer, Executive Director  
Medical Board of California  
2005 Evergreen Street  
Suite 1200  
Sacramento, CA 95815-5401

Dear Ms. Kirchmeyer,

The Society of Interventional Radiology (SIR) is the national physician specialty organization with over 7,000 members representing Interventional Radiologists in the US. Interventional Radiology (IR) is an innovative specialty that uses imaging guidance to perform minimally invasive procedures on almost every organ system and has developed techniques to treat diseases ranging from liver cancer to uterine fibroids. Interventional radiologists are clinical physicians who serve a critical role in caring for the sickest patients.

In 2012, the American Board of Medical Specialties (ABMS) recognized Interventional Radiology as an independent specialty requiring “competence in imaging, image-guided minimally invasive procedures and peri-procedural patient care to diagnose and treat benign and malignant conditions of the thorax, abdomen, pelvis, and extremities.” Prior to this, vascular and interventional radiology (VIR) was considered a subspecialty of diagnostic radiology.

Today, the primary specialty of Interventional Radiology has a unique GME residency program accredited by the Accreditation Council for Graduate Medical Education (ACGME), as well as a unique and independent board certification (the Interventional Radiology/Diagnostic Radiology (IR/DR) certificate) from the American Board of Radiology. The IR/DR certificate is one of four primary certificates offered by the ABR and is separate and distinct from a primary certificate in Diagnostic Radiology (DR). Newly certified IRs, as well as those previously holding both a DR primary certificate and an IR Certificate of Added Qualifications, began receiving IR/DR certification on October 15, 2017.

SIR members have let us know that in California they are unable to select Interventional Radiology as their primary practice area. This is particularly important given the highly clinical and procedural nature of the specialty, which is as different from diagnostic radiology as it is from other primary specialties. IRs are being denied admission to insurance networks simply because the state licensing database has not been updated to show IRs as a primary specialty. Unless an IR can designate him or herself correctly, networks may believe they have a satisfactory complement of physicians when they are actually limiting patient access to interventional radiologists.
Furthermore, patients who seek IR care are confused when their physician is listed incorrectly as a diagnostic radiologist, yet the patient is scheduled for an invasive procedure or clinical evaluation.

We ask you to update the California medical board licensing options to allow licensees to designate Interventional Radiology as their primary practice area.

Thank you for the opportunity to provide this input to your Board. If SIR can provide additional information please do not hesitate to contact Susan Sedory, SIR’s Executive Director, at (703) 691-1805, or ssedory@sirweb.org.

Sincerely,

M. Victoria Marx, MD, FSIR
President
Dear Mr. Covington,

The Society of Interventional Radiology (SIR) is the national physician specialty organization with over 7,000 members representing Interventional Radiologists in the US. Interventional Radiology (IR) is an innovative specialty that uses imaging guidance to perform minimally invasive procedures on almost every organ system and has developed techniques to treat diseases ranging from liver cancer to uterine fibroids. Interventional radiologists are clinical physicians who serve a critical role in caring for the sickest patients.

In 2012, the American Board of Medical Specialties (ABMS) recognized Interventional Radiology as an independent specialty requiring “competence in imaging, image-guided minimally invasive procedures and peri-procedural patient care to diagnose and treat benign and malignant conditions of the thorax, abdomen, pelvis, and extremities.” Prior to this, vascular and interventional radiology (VIR) was considered a subspecialty of diagnostic radiology.

Today, the primary specialty of Interventional Radiology has a unique GME residency program accredited by the Accreditation Council for Graduate Medical Education (ACGME), as well as a unique and independent board certification (the Interventional Radiology/Diagnostic Radiology (IR/DR) certificate) from the American Board of Radiology. The IR/DR certificate is one of four primary certificates offered by the ABR and is separate and distinct from a primary certificate in Diagnostic Radiology (DR). Newly certified IRs, as well as those previously holding both a DR primary certificate and an IR Certificate of Added Qualifications, began receiving IR/DR certification on October 15, 2017.

SIR members have let us know that in Indiana they are unable to select Interventional Radiology as their primary practice area. This is particularly important given the highly clinical and procedural nature of the specialty, which is as different from diagnostic radiology as it is from other primary specialties. IRs are being denied admission to insurance networks simply because the state licensing database has not been updated to show IRs as a primary specialty. Unless an IR can designate him or herself correctly, networks may believe they have a satisfactory complement of physicians when they are actually limiting patient access to interventional radiologists.
Furthermore, patients who seek IR care are confused when their physician is listed incorrectly as a diagnostic radiologist, yet the patient is scheduled for an invasive procedure or clinical evaluation.

We ask you to update the Indiana medical board licensing options to allow licensees to designate Interventional Radiology as their primary practice area.

Thank you for the opportunity to provide this input to your Board. If SIR can provide additional information please do not hesitate to contact Susan Sedory, SIR’s Executive Director, at (703) 691-1805, or ssedory@sirweb.org.

Sincerely,

M. Victoria Marx, MD, FSIR
President
Dear Mr. Rodman,

The Society of Interventional Radiology (SIR) is the national physician specialty organization with over 7,000 members representing Interventional Radiologists in the US. Interventional Radiology (IR) is an innovative specialty that uses imaging guidance to perform minimally invasive procedures on almost every organ system and has developed techniques to treat diseases ranging from liver cancer to uterine fibroids. Interventional radiologists are clinical physicians who serve a critical role in caring for the sickest patients.

In 2012, the American Board of Medical Specialties (ABMS) recognized Interventional Radiology as an independent specialty requiring “competence in imaging, image-guided minimally invasive procedures and peri-procedural patient care to diagnose and treat benign and malignant conditions of the thorax, abdomen, pelvis, and extremities.” Prior to this, vascular and interventional radiology (VIR) was considered a subspecialty of diagnostic radiology. Today, the primary specialty of Interventional Radiology has a unique GME residency program accredited by the Accreditation Council for Graduate Medical Education (ACGME), as well as a unique and independent board certification (the Interventional Radiology/Diagnostic Radiology (IR/DR) certificate) from the American Board of Radiology. The IR/DR certificate is one of four primary certificates offered by the ABR and is separate and distinct from a primary certificate in Diagnostic Radiology (DR). Newly certified IRs, as well as those previously holding both a DR primary certificate and an IR Certificate of Added Qualifications, began receiving IR/DR certification on October 15, 2017.

SIR members have let us know that in Kentucky they are unable to select Interventional Radiology as their primary practice area. This is particularly important given the highly clinical and procedural nature of the specialty, which is as different from diagnostic radiology as it is from other primary specialties. IRs are being denied admission to insurance networks simply because the state licensing database has not been updated to show IRs as a primary specialty. Unless an IR can designate him or herself correctly, networks may believe they have a satisfactory complement of physicians when they are actually limiting patient access to interventional radiologists.

Michael S. Rodman, Executive Director
Kentucky Board of Medical Licensure

Dear Mr. Herlihy,

The Society of Interventional Radiology (SIR) is the national physician specialty organization with over 7,000 members representing Interventional Radiologists in the US. Interventional Radiology (IR) is an innovative specialty that uses imaging guidance to perform minimally invasive procedures on almost every organ system and has developed techniques to treat diseases ranging from liver cancer to uterine fibroids. Interventional radiologists are clinical physicians who serve a critical role in caring for the sickest patients.

In 2012, the American Board of Medical Specialties (ABMS) recognized Interventional Radiology as an independent specialty requiring “competence in imaging, image-guided minimally invasive procedures and peri-procedural patient care to diagnose and treat benign and malignant conditions of the thorax, abdomen, pelvis, and extremities.” Prior to this, vascular and interventional radiology (VIR) was considered a subspecialty of diagnostic radiology.

Today, the primary specialty of Interventional Radiology has a unique GME residency program accredited by the Accreditation Council for Graduate Medical Education (ACGME), as well as a unique and independent board certification (the Interventional Radiology/Diagnostic Radiology (IR/DR) certificate) from the American Board of Radiology. The IR/DR certificate is one of four primary certificates offered by the ABR and is separate and distinct from a primary certificate in Diagnostic Radiology (DR). Newly certified IRs, as well as those previously holding both a DR primary certificate and an IR Certificate of Added Qualifications, began receiving IR/DR certification on October 15, 2017.

SIR members have let us know that in Vermont they are unable to select Interventional Radiology as their primary practice area. This is particularly important given the highly clinical and procedural nature of the specialty, which is as different from diagnostic radiology as it is from other primary specialties. IRs are being denied admission to insurance networks simply because the state licensing database has not been updated to show IRs as a primary specialty. Unless an IR can designate him or herself correctly, networks may believe they have a satisfactory complement of physicians when they are actually limiting patient access to interventional radiologists.
Furthermore, patients who seek IR care are confused when their physician is listed incorrectly as a diagnostic radiologist, yet the patient is scheduled for an invasive procedure or clinical evaluation.

We ask you to update the Vermont medical board licensing options to allow licensees to designate Interventional Radiology as their primary practice area.

Thank you for the opportunity to provide this input to your Board. If SIR can provide additional information please do not hesitate to contact Susan Sedory, SIR’s Executive Director, at (703) 691-1805, or ssedory@sirweb.org.

Sincerely,

M. Victoria Marx, MD, FSIR
President
Dear Mr. Harp,

The Society of Interventional Radiology (SIR) is the national physician specialty organization with over 7,000 members representing Interventional Radiologists in the US. Interventional Radiology (IR) is an innovative specialty that uses imaging guidance to perform minimally invasive procedures on almost every organ system and has developed techniques to treat diseases ranging from liver cancer to uterine fibroids. Interventional radiologists are clinical physicians who serve a critical role in caring for the sickest patients.

In 2012, the American Board of Medical Specialties (ABMS) recognized Interventional Radiology as an independent specialty requiring “competence in imaging, image-guided minimally invasive procedures and peri-procedural patient care to diagnose and treat benign and malignant conditions of the thorax, abdomen, pelvis, and extremities.” Prior to this, vascular and interventional radiology (VIR) was considered a subspecialty of diagnostic radiology.

Today, the primary specialty of Interventional Radiology has a unique GME residency program accredited by the Accreditation Council for Graduate Medical Education (ACGME), as well as a unique and independent board certification (the Interventional Radiology/Diagnostic Radiology (IR/DR) certificate) from the American Board of Radiology. The IR/DR certificate is one of four primary certificates offered by the ABR and is separate and distinct from a primary certificate in Diagnostic Radiology (DR). Newly certified IRs, as well as those previously holding both a DR primary certificate and an IR Certificate of Added Qualifications, began receiving IR/DR certification on October 15, 2017.

SIR members have let us know that in Virginia they are unable to select Interventional Radiology as their primary practice area. This is particularly important given the highly clinical and procedural nature of the specialty, which is as different from diagnostic radiology as it is from other primary specialties. IRs are being denied admission to insurance networks simply because the state licensing database has not been updated to show IRs as a primary specialty. Unless an IR can designate him or herself correctly, networks may believe they have a satisfactory complement of physicians when they are actually limiting patient access to interventional radiologists.
Furthermore, patients who seek IR care are confused when their physician is listed incorrectly as a diagnostic radiologist, yet the patient is scheduled for an invasive procedure or clinical evaluation.

We ask you to update the Virginia medical board licensing options to allow licensees to designate Interventional Radiology as their primary practice area.

Thank you for the opportunity to provide this input to your Board. If SIR can provide additional information please do not hesitate to contact Susan Sedory, SIR’s Executive Director, at (703) 691-1805, or ssedory@sirweb.org.

Sincerely,

M. Victoria Marx, MD, FSIR
President
Dear Mr. Meyers,

The Society of Interventional Radiology (SIR) is the national physician specialty organization with over 7,000 members representing Interventional Radiologists in the US. Interventional Radiology (IR) is an innovative specialty that uses imaging guidance to perform minimally invasive procedures on almost every organ system and has developed techniques to treat diseases ranging from liver cancer to uterine fibroids. Interventional radiologists are clinical physicians who serve a critical role in caring for the sickest patients.

In 2012, the American Board of Medical Specialties (ABMS) recognized Interventional Radiology as an independent specialty requiring “competence in imaging, image-guided minimally invasive procedures and peri-procedural patient care to diagnose and treat benign and malignant conditions of the thorax, abdomen, pelvis, and extremities.” Prior to this, vascular and interventional radiology (VIR) was considered a subspecialty of diagnostic radiology.

Today, the primary specialty of Interventional Radiology has a unique GME residency program accredited by the Accreditation Council for Graduate Medical Education (ACGME), as well as a unique and independent board certification (the Interventional Radiology/Diagnostic Radiology (IR/DR) certificate) from the American Board of Radiology. The IR/DR certificate is one of four primary certificates offered by the ABR and is separate and distinct from a primary certificate in Diagnostic Radiology (DR). Newly certified IRs, as well as those previously holding both a DR primary certificate and an IR Certificate of Added Qualifications, began receiving IR/DR certification on October 15, 2017.

SIR members have let us know that in Washington DC they are unable to select Interventional Radiology as their primary practice area. This is particularly important given the highly clinical and procedural nature of the specialty, which is as different from diagnostic radiology as it is from other primary specialties. IRs are being denied admission to insurance networks simply because the state licensing database has not been updated to show IRs as a primary specialty. Unless an IR can designate him or herself correctly, networks may believe they have a satisfactory complement of physicians when they are actually limiting patient access to interventional radiologists.
Furthermore, patients who seek IR care are confused when their physician is listed incorrectly as a diagnostic radiologist, yet the patient is scheduled for an invasive procedure or clinical evaluation.

We ask you to update the Washington DC medical board licensing options to allow licensees to designate Interventional Radiology as their primary practice area.

Thank you for the opportunity to provide this input to your Board. If SIR can provide additional information please do not hesitate to contact Susan Sedory, SIR’s Executive Director, at (703) 691-1805, or ssedory@sirweb.org.

Sincerely,

M. Victoria Marx, MD, FSIR
President
Dear Mr. Bohnenblust,

The Society of Interventional Radiology (SIR) is the national physician specialty organization with over 7,000 members representing Interventional Radiologists in the US. Interventional Radiology (IR) is an innovative specialty that uses imaging guidance to perform minimally invasive procedures on almost every organ system and has developed techniques to treat diseases ranging from liver cancer to uterine fibroids. Interventional radiologists are clinical physicians who serve a critical role in caring for the sickest patients.

In 2012, the American Board of Medical Specialties (ABMS) recognized Interventional Radiology as an independent specialty requiring “competence in imaging, image-guided minimally invasive procedures and peri-procedural patient care to diagnose and treat benign and malignant conditions of the thorax, abdomen, pelvis, and extremities.” Prior to this, vascular and interventional radiology (VIR) was considered a subspecialty of diagnostic radiology.

Today, the primary specialty of Interventional Radiology has a unique GME residency program accredited by the Accreditation Council for Graduate Medical Education (ACGME), as well as a unique and independent board certification (the Interventional Radiology/Diagnostic Radiology (IR/DR) certificate) from the American Board of Radiology. The IR/DR certificate is one of four primary certificates offered by the ABR and is separate and distinct from a primary certificate in Diagnostic Radiology (DR). Newly certified IRs, as well as those previously holding both a DR primary certificate and an IR Certificate of Added Qualifications, began receiving IR/DR certification on October 15, 2017.

SIR members have let us know that in Wyoming they are unable to select Interventional Radiology as their primary practice area. This is particularly important given the highly clinical and procedural nature of the specialty, which is as different from diagnostic radiology as it is from other primary specialties. IRs are being denied admission to insurance networks simply because the state licensing database has not been updated to show IRs as a primary specialty. Unless an IR can designate him or herself correctly, networks may believe they have a satisfactory complement of physicians when they are actually limiting patient access to interventional radiologists.
Furthermore, patients who seek IR care are confused when their physician is listed incorrectly as a diagnostic radiologist, yet the patient is scheduled for an invasive procedure or clinical evaluation.

We ask you to update the Wyoming medical board licensing options to allow licensees to designate Interventional Radiology as their primary practice area.

Thank you for the opportunity to provide this input to your Board. If SIR can provide additional information please do not hesitate to contact Susan Sedory, SIR’s Executive Director, at (703) 691-1805, or ssedory@sirweb.org.

Sincerely,

M. Victoria Marx, MD, FSIR
President
