Interventional oncology (IO)

Research consensus panels

- Sept. 2002: IO Research Roundtable
- April 2006: Lung Oncology
- March 2006: Liver Oncology
- Oct. 2011: Management of Metastatic Colorectal Cancer
- June 2015: Image-Guided Biopsy in the Era of Personalized Cancer Care
- March 2019: Immunotherapy and IR (Led to the development of the IO-CORE registry)

62 grants funded

- 38 Pilot Research
- 11 Allied Scientist Training
- 8 Dr. Ernest J. Ring Academic Development
- 1 Harvey L Neiman Health Policy Institute Cost Effectiveness
- 1 Academic Transition
- Other

IO-CORE

The Global Interventional Oncology–Clinical Outcomes Registry (IO-CORE) is an international registry to collect prospective clinical evidence in IO. IO-CORE is a collaborative partnership between the Society for Interventional Radiology (SIR) and the Society of Interventional Oncology (SIO). It will involve representative leadership for each major disease domain and establish guidelines for clinical registry platform creation, participation agreements, data transmission and storage.

The SIR-SIO alliance involves leadership from diverse geographic regions including the Americas, Europe and Asia-Pacific to provide scientific oversight, establish priority areas for investigation and ensure data integrity.

The registry arose from a jointly held RCP with SIO on musculoskeletal IR and facilitated by Matthew R. Callstrom, MD, PhD. SIR Foundation provides administration, financial, and operations support with SIO to manage the registry.

Other interventional oncology highlights

From Karun Sharma, MD, PhD, FSIR—

“Spatiotemporal Distribution and Local Tissue pharmacokinetics following transcatheter embolization with drug eluting beads” (Awarded SIR Foundation Ring Grant in 2008)

“Development of “Imageable” Beads for Transcatheter Embolotherapy” JVIR (2010)

“Preparation of Radiopaque Drug-Eluting Beads for Transcatheter Chemoembolization”

This publication acknowledges SIR Foundation: “This study was conducted in the Center for Interventional Oncology and is supported in part by the Intramural Research Program of the National Institutes of Health and the Society of Interventional Radiology Foundation Ring Grant.” JVIR (2015)
